UNIX!® UNIX is a trademark of X/Open Company Inc., owned by X/Open Company Inc. OpenPLI OpenPLI is the premier IDE for Open Source PCB design and fabrication. Features include advanced 2D and 3D PCB drafting and routing, advanced PCB fabrication capability with a wide array of design and manufacturing options, and comprehensive automated test tools to produce a quality design. CUDA® A cross-platform toolkit for accelerating the application of GPGPU computing on GPUs, the CUDAToolkit provides a unified API for heterogeneous architectures and an optimized set of programming tools and libraries.

VonNoorden VonNoorden is a feature rich, easy-to-use software tool for generating reusable PCB assemblies and parts to fit a variety of applications. With vonNoorden, engineers have the tools they need to easily create reliable and cost-effective designs at the full PCB level, and obtain the parts they need quickly and cost-effectively. Chibitronics Chibitronics is a free, open source electronic design automation (EDA) and printed circuit board (PCB) design software. It is written in the Perl programming language and requires no installation or configuration. It features comprehensive 2D/3D schematic capture with network synthesis capabilities, and a graphical 2D/3D layout editor. OpenSCAD OpenSCAD is a free 3D CAD program that works on Linux, BSD, Mac OS X, and other UNIX operating systems. It supports both 2D and 3D vector graphics and parametric modeling. Genesis Design Suite by Cypress Semiconductor, a large family of electronics design, simulation, and test tools that include schematic capture, 2D/3D schematic/layout, PCB layout, wiring, bill of materials (BOM), simulation, FPGA/FPGA-to-IP conversion, and system level simulation. GEDA GEDA is a commercial EDA application developed by Synopsys. It is a 3D schematic capture and layout application that includes an open source 2D schematic capture component that is ported from GEDA. Autodesk Autodesk Synchronous provides extensive 3D CAD modeling capabilities for PCB design. Its FEM-based flow solver delivers breakthrough PCB simulation accuracy at the FEM boundary and in the bulk material
